SUMMARY

Researcher and Engineer specializing in 3D reconstruction and geometry processing. Focused on implementing high-performance C++ pipelines that translate 3D computer vision methods into scalable, production-ready systems.

EDUCATION

TU Dortmund University

PhD in Computer Science (Dr. rer. nat.)

- Thesis submitted; currently awaiting defense (Expected Aug. 2026).

Dortmund, Germany

May 2021 – Present

Bielefeld University

M.Sc. in Intelligent Systems

Bielefeld, Germany

Oct. 2018 – Oct. 2020

Bielefeld University

B.Sc. in Informatics for the Natural Sciences

Bielefeld, Germany

Oct. 2015 – Oct. 2018

EXPERIENCE

Research Assistant

Graphics & Geometry Group, Bielefeld University → TU Dortmund University

May 2020 – Apr. 2026

Dortmund, Germany

- Started research position at Bielefeld University; relocated with the group to TU Dortmund in Oct. 2020.
- Bridged the gap between high-level research and production by creating consumer-accessible software for 3D reconstruction.
- Interdisciplinary collaboration to evaluate method performance and **user experience (UX)**.
- Published research findings in high-impact, **peer-reviewed journals** and international conferences.

SELECTED PROJECTS

Avatars for the Masses | C++, Python, Swift, LiDAR, OpenCV, OpenGL, MediaPipe, Eigen

2023 – 2025

- **System Architecture:** Developed a scalable server-pipeline for 3D reconstruction, integrating segmentation, photogrammetry, and template-fitting for VR-ready avatars.
- **Mobile Development:** Engineered an iOS app for guided RGB and LiDAR data capture.
- **Error Compensation:** Extended the pipeline with algorithms to mitigate motion-induced artifacts, improving reconstruction fidelity in uncontrolled environments.
- **Publications:** Main paper in *Frontiers in VR* (2025); Contribution on error compensation in *ACM VRST 2025*.
- **Project Link:** avatars.cs.tu-dortmund.de

Automated Blendshape Personalization | C++, Swift, ARKit, Eigen

2021 – 2022

- **Facial Animation:** Developed an automated pipeline for personalizing facial blendshapes from smartphone data to achieve faithful facial expressions.
- **Integration:** Utilized ARKit for data acquisition and C++ for backend geometry processing.
- **Publication:** Appeared in *ACM VRST 2022*.

Deformation Transfer Demo | C++, OpenGL/Viewer, Eigen

2026

- **Mesh Deformation:** Implemented a C++ demo to transfer recorded facial expressions between source and target meshes using deformation transfer.
- **Visualization:** Developed an interactive viewer for side-by-side mesh comparison.
- **Open Source:** [GitHub Repository](#) | [Interactive Demo](#)

SKILLS

Programming: C++, Swift, Python, C#, Bash

Computer Vision & 3D: OpenCV, ICP, Photogrammetry, Non-rigid Reg., Halfedge Meshes, ARKit, MediaPipe

Graphics & Math: Linear Algebra, Camera Geometry, OpenGL, Eigen/MKL, PMP-Library

Engineering: Object-Oriented Programming (OOP), Git, CI/CD, Docker, Linux, CMake, GoogleTest

Languages: German (Native), English (Fluent), French (Basic)
